acsense

THE ENTERPRISE IAM RESILIENCE PLATFORM

acsense is the trusted go-to partner for enterprise IAM resilience, providing proactive continuity solutions that minimize the impact of IAM outages and downtime.

Our platform empowers IT, security, and GRC leaders to tackle IAM as a single point of failure, effectively addressing threats like ransomware, insider risks and human error, all within a single comprehensive platform.

Overview:

Saas-Based Identity Management Services Are The "Front Door" To Any Organization.

These services are responsible for:

- Workforce and Customer Identity Management and Authentication
- Application access and assignment
- Security and compliance policies, etc.

However, while being mission-critical for any customer, these services are a single point of failure. While the Cloud (Service) Provider is responsible for service SLA, customers are responsible for their own data and its integrity.

Responsibility	On Prem	IaaS	PaaS	SaaS
Identities, Tenant Configuration, Access Policies, Applications Permissions"	Customer	Customer	Customer	Customer
Client & End-point Protection	Customer	Customer	Customer	Customer/Provider
Identity & Access Management	Customer	Customer	Customer/Provider	Customer/Provider
Application Level Controls	Customer	Customer	Customer/Provider	Provider
Network Controls	Customer	Customer/Provider	Provider	Provider
Host Infrastrcture	Customer	Customer/Provider	Provider	Provider
Physical Security	Customer	Provider	Provider	Provider

■ Cloud Customer □ Cloud Provider

> **Most organizations think they are protected once everything is on the cloud. That if a cyber, ransomware, malware attack, or even a misconfiguration will happen, you will have the ability from your SaaS provider to recover.**
>
> *This is simply not true...*
> *You can only trust yourself and your organization."*

– Lior Zagury | Director of Global IT

About acsense:

Hailing out of Tel Aviv, Israel, the team at acsense, former EMC veterans have been exposed to the most challenging IT and security ecosystems in the world. After endless IAM implementation use-cases and experience in handling IAM disasters, the acsense team decided to solve the inherent vulnerabilities in IAM infrastructure.

acsense is a cutting-edge easy to use IAM resilience platform that caters to both workforce and customer IAM requirements with a unified solution. Our platform boasts one-click recovery, continuous data verification, routine testing, and the ability to detect alterations between Points in Time, fortifying the resilience of your IAM system.

acsense is backed by Joule Ventures, Gefen Capital, Fusion and independent investors.
